Beyond the Box of Space and Time: An Experience of Physics That Includes the Mind (Volume 1) Jim Raschick

Space and time has always been the great defining boundary of scientific understanding. With that in mind this book is the story of a personal journey that describes an attempt to discover the nature of space and time using terms of modern science within the confines of ancient wisdom traditions—such as found in the teachings of the Buddha and among Native American Medicine people, Tibetan and Mongolian Lamas, and Hawaiian spiritual leaders. This in turn, resulted in a proposal for a new paradigm for physics. The new paradigm identifies a boundary encircling all of existing reality, and then describes a way to function outside of that boundary. Accordingly, physical science as we know it is described as incomplete. Its apparently irreproachable laws of nature define a box out of which it cannot escape—if elements of the box are used as tools in the escape attempt. Modern science generally arose out of the rich interplay between it and the philosophies and religions of Western culture. Its offspring is a map of reality that we see as the laws of nature. But, as sometimes happens in families, science (i.e. the parent) is unwittingly being held captive by the child it produced. The proposed new paradigm encompasses all of conceptual reality, not just the phenomenal world described in terms of space and time. In this way it includes much of what has heretofore been classed as the domain of spirituality, but it does not include that entire domain. This book is for a person interested in science. It can take that person beyond the constraints of space and time, but it will not take a spiritual seeker beyond the veil of conceptual reality. Buddhism and perhaps other religions, tell us that it is possible to discover a state beyond the veil; but that discovery is an endeavor requiring a special teacher. In this way, what is written here is in terms of science and does not require a level of faith to comprehend. This is a view of conceptual reality from an indicated vantage point that sits outside of reality. The view basically states that the world [reality] we experience in and around us is an illusion whose true nature is something else. The illusion is pointedly not an apparition or a hallucination of something that does not exist—instead, it is essentially very real, but it is not as our senses portray it. Out of this view comes a proposed new paradigm of physics that can push our civilization beyond its current constraints, perhaps even out to the stars. Indigenous societies saw [what's called] their ancient wisdom as a method of manipulating the momentum of reality and controlling natural forces. For them such actions were survival strategies; but for us it can be a new way of living in our universe. Beyond the Box of Space and Time deconstructs physics as we know it, and reassembles it as a new paradigm that includes the mind. Within it the flow of time is a 2000+ year old metric not based on the movement of the stars and planets.
