High-Level Parallel Programming Models and Supportive Environments: 6th International Workshop, HIPS 2001 San Francisco, CA, USA, April 23, 2001 Proceedings (Lecture Notes in Computer Science)

On the 23rd of April, 2001, the 6th Workshop on High-Level Parallel Programming Models and Supportive Environments (LCTES'98) was held in San Francisco. HIPS has been held over the past six years in conjunction with IPDPS, the International Parallel and Distributed Processing Symposium. The HIPS workshop focuses on high-level programming of networks of workstations, computing clusters and of massively-parallel machines. Its goal is to bring together researchers working in the areas of applications, language design, compilers, system architecture and programming tools to discuss new developments in programming such systems. In recent years, several standards have emerged with an increasing demand of support for parallel and distributed processing. On one end, message-passing frameworks, such as PVM, MPI and VIA, provide support for basic communication. On the other hand, distributed object standards, such as CORBA and DCOM, provide support for handling remote objects in a client-server fashion but also ensure certain guarantees for the quality of services. The key issues for the success of programming parallel and distributed environments are high-level programming concepts and efficiency. In addition, other quality categories have to be taken into account, such as scalability, security, bandwidth guarantees and fault tolerance, just to name a few. Today's challenge is to provide high-level programming concepts without sacrificing efficiency. This is only possible by carefully designing for those concepts and by providing supportive programming environments that facilitate program development and tuning.

From reader reviews:

Kyle Coffman:

The book High-Level Parallel Programming Models and Supportive Environments: 6th International Workshop, HIPS 2001 San Francisco, CA, USA, April 23, 2001 Proceedings (Lecture Notes in Computer Science) can give more knowledge and also the precise product information about everything you want. So why must we leave a good thing like a book High-Level Parallel Programming Models and Supportive Environments: 6th International Workshop, HIPS 2001 San Francisco, CA, USA, April 23, 2001 Proceedings (Lecture Notes in Computer Science)? Wide variety you have a different opinion about reserve. But one aim which book can give many info for us. It is absolutely suitable. Right now, try to closer with your book. Knowledge or information that you take for that, you could give for each other; it is possible to share all of these. Book High-Level Parallel Programming Models and Supportive Environments: 6th International Workshop, HIPS 2001 San Francisco, CA, USA, April 23, 2001 Proceedings (Lecture Notes in Computer Science) has simple shape however you know: it has great and massive function for you. You can look the enormous world by open up and read a book. So it is very wonderful.

Vincent Ashworth:

Do you have something that you want such as book? The reserve lovers usually prefer to pick book like comic, quick story and the biggest some may be novel. Now, why not striving High-Level Parallel Programming Models and Supportive Environments: 6th International Workshop, HIPS 2001 San Francisco, CA, USA, April 23, 2001 Proceedings (Lecture Notes in Computer Science) that give your enjoyment preference will be satisfied simply by reading this book. Reading habit all over the world can be said as the way for people to know world far better then how they react toward the world. It can't be mentioned constantly that reading practice only for the geeky man or woman but for all of you who wants to become success person. So , for all you who want to start studying as your good habit, you could pick High-Level Parallel Programming Models and Supportive Environments: 6th International Workshop, HIPS 2001 San Francisco, CA, USA, April 23, 2001 Proceedings (Lecture Notes in Computer Science) become your personal starter.

Louise Villanueva:

Reading a book being new life style in this 12 months; every people loves to read a book. When you study a book you can get a lots of benefit. When you read textbooks, you can improve your knowledge, since book has a lot of information into it. The information that you will get depend on what types of book that you have read. If you would like get information about your examine, you can read education books, but if you want to entertain yourself read a fiction books, such us novel, comics, and also soon. The High-Level Parallel Programming Models and Supportive Environments: 6th International Workshop, HIPS 2001 San Francisco, CA, USA, April 23, 2001 Proceedings (Lecture Notes in Computer Science) offer you a new experience in examining a book.

Eli Benton:

That book can make you to feel relax. This book High-Level Parallel Programming Models and Supportive Environments: 6th International Workshop, HIPS 2001 San Francisco, CA, USA, April 23, 2001 Proceedings (Lecture Notes in Computer Science) was bright colored and of course has pictures on there. As we know that book High-Level Parallel Programming Models and Supportive Environments: 6th International Workshop, HIPS 2001 San Francisco, CA, USA, April 23, 2001 Proceedings (Lecture Notes in Computer Science) has many kinds or genre. Start from kids until teens. For example Naruto or Private eye Conan you can read and think you are the character on there. So , not at all of book are usually make you bored, any it offers you feel happy, fun and rest. Try to choose the best book to suit your needs and try to like reading in which.
