Remote Observatories for Amateur Astronomers (The Patrick Moore Practical Astronomy Series)

Hubbell, Williams, Billard

Amateur astronomers who want to enhance their capabilities to contribute to science need look no farther than this guide to using remote observatories. The contributors cover how to build your own remote observatory as well as the existing infrastructure of commercial networks of remote observatories that are available to the amateur. They provide specific advice on which programs to use based on your project objectives and offer practical project suggestions. Remotely controlled observatories have many advantages—the most obvious that the observer does not have to be physically present to carry out observations. Such an observatory can also be used more fully because its time can be scheduled and usefully shared among several astronomers working on different observing projects. More and more professional-level observatories are open to use by amateurs in this way via the Internet, and more advanced amateur astronomers can even build their own remote observatories for sharing among members of a society or interest group.

Endorsements:

“Remote Observatories for Amateur Astronomers Using High-Powered Telescopes from Home, by Jerry Hubbell, Rich Williams, and Linda Billard, is a unique contribution centering on computer-controlled private observatories owned by amateur astronomers and commercialized professional–amateur observatories where observing time to collect data can be purchased. Before this book, trying to piece together all of the necessary elements and processes that make up a remotely operated observatory was daunting. The authors and contributors have provided, in this single publication, a wealth of information gained from years of experience that will save you considerable money and countless hours in trying to develop such an observatory.

If you follow the methods and processes laid out in this book and choose to build your own remotely operated observatory or decide to become a regular user of one of the commercial networks, you will not only join an elite group of advanced astronomers who make regular submissions to science, but you will become a member of an ancient fraternity. Your high-technology observatory will contain a “high-powered telescope” no matter how large it is, and from the comfort of home, you can actively contribute to the work that started in pre-history to help uncover the secrets of the cosmos.”

Scott Roberts

Founder and President, Explore Scientific, LLC.

“In the past three and a half decades, since I first became involved with remote observatories, the use of

remote, unmanned telescopes at fully automated observatories has advanced from a very rare approach for making astronomical observations to an increasingly dominant mode for observation among both professional and amateur astronomers. I am very pleased to see this timely book being published on the topic.

I highly recommend this book to readers because it not only covers the knowledge needed to become an informed user of existing remote observatories, but also describes what you need to know to develop your own remote observatory. It draws on more than two decades of remote observatory operation and networking by coauthor Rich Williams as he developed the Sierra Stars Observatory Network (SSON) into the world-class network it is today. This book is the ideal follow-on to coauthor Jerry Hubbell's book *Scientific Astrophotography* (Springer 2012).

Remote observatories have a bright future, opening up astronomy to a new and much larger generation of professional, amateur, and student observers. Machines and humans can and do work well together. I hope you enjoy reading this book as much as I have and will take advantage of the developments over the past several decades by the many pioneers of remote observatories."

Russ Genet, PhD.

From reader reviews:

Debra Yarbrough:

The book Remote Observatories for Amateur Astronomers (The Patrick Moore Practical Astronomy Series) will bring you to the new experience of reading some sort of book. The author style to spell out the idea is very unique. When you try to find new book you just read, this book very suited to you. The book Remote Observatories for Amateur Astronomers (The Patrick Moore Practical Astronomy Series) is much recommended to you to learn. You can also get the e-book in the official web site, so you can quickly to read the book.

Alison Caulfield:

Exactly why? Because this Remote Observatories for Amateur Astronomers (The Patrick Moore Practical Astronomy Series) is an unordinary book that the inside of the book waiting for you to snap it but latter it will zap you with the secret that inside. Reading this book adjacent to it was fantastic author who write the book in such incredible way makes the content on the inside easier to understand, entertaining method but still convey the meaning fully. So , it is good for you for not hesitating having this any longer or you going to regret it. This phenomenal book will give you a lot of positive aspects than the other book get such as help improving your skill and your critical thinking method. So , still want to hesitate having that book? If I were being you I will go to the e-book store hurriedly.

George Rodriguez:

As we know that book is significant thing to add our know-how for everything. By a e-book we can know everything we wish. A book is a list of written, printed, illustrated or blank sheet. Every year ended up being exactly added. This e-book Remote Observatories for Amateur Astronomers (The Patrick Moore Practical Astronomy Series) was filled about science. Spend your free time to add your knowledge about your scientific disciplines competence. Some people has various feel when they reading the book. If you know how big selling point of a book, you can feel enjoy to read a e-book. In the modern era like today, many ways to get book that you just wanted.

Danny Floyd:

As a scholar exactly feel bored to help reading. If their teacher expected them to go to the library as well as to make summary for some publication, they are complained. Just minor students that has reading's heart or real their leisure activity. They just do what the teacher want, like asked to go to the library. They go to right now there but nothing reading very seriously. Any students feel that examining is not important, boring along with can't see colorful photographs on there. Yeah, it is to become complicated. Book is very important to suit your needs. As we know that on this period of time, many ways to get whatever we really wish for. Likewise word says, many ways to reach Chinese's country. Therefore , this Remote Observatories for Amateur Astronomers (The Patrick Moore Practical Astronomy Series) can make you feel more

interested to read.
