Rick Miranda

Algebraic Curves and Riemann Surfaces (Graduate Studies in Mathematics, Vol 5) Rick Miranda
In this book, Miranda takes the approach that algebraic curves are best encountered for the first time over the complex numbers, where the reader's classical intuition about surfaces, integration, and other concepts can be brought into play. Therefore, many examples of algebraic curves are presented in the first chapters. In this way, the book begins as a primer on Riemann surfaces, with complex charts and meromorphic functions taking center stage. But the main examples come from projective curves, and slowly but surely the text moves toward the algebraic category. Proofs of the Riemann-Roch and Serre Duality Theorems are presented in an algebraic manner, via an adaptation of the adelic proof, expressed completely in terms of solving a Mittag-Leffler problem. Sheaves and cohomology are introduced as a unifying device in the latter chapters, so that their utility and naturalness are immediately obvious. Requiring a background of a one semester of complex variable! theory and a year of abstract algebra, this is an excellent graduate textbook for a second-semester course in complex variables or a year-long course in algebraic geometry.

From reader reviews:

Veronica McFadden:

The knowledge that you get from Algebraic Curves and Riemann Surfaces (Graduate Studies in Mathematics, Vol 5) is a more deep you looking the information that hide into the words the more you get considering reading it. It doesn't mean that this book is hard to know but Algebraic Curves and Riemann Surfaces (Graduate Studies in Mathematics, Vol 5) giving you excitement feeling of reading. The article writer conveys their point in a number of way that can be understood by anyone who read the item because the author of this e-book is well-known enough. That book also makes your current vocabulary increase well. Making it easy to understand then can go along, both in printed or e-book style are available. We propose you for having this particular Algebraic Curves and Riemann Surfaces (Graduate Studies in Mathematics, Vol 5) instantly.

Susanne Pineda:

Are you kind of occupied person, only have 10 or perhaps 15 minute in your day time to upgrading your mind skill or thinking skill perhaps analytical thinking? Then you have problem with the book in comparison with can satisfy your short space of time to read it because all this time you only find reserve that need more time to be examine. Algebraic Curves and Riemann Surfaces (Graduate Studies in Mathematics, Vol 5) can be your answer given it can be read by an individual who have those short extra time problems.

Jenifer Bell:

In this period of time globalization it is important to someone to acquire information. The information will make a professional understand the condition of the world. The fitness of the world makes the information better to share. You can find a lot of references to get information example: internet, magazine, book, and soon. You can observe that now, a lot of publisher that will print many kinds of book. The book that recommended to your account is Algebraic Curves and Riemann Surfaces (Graduate Studies in Mathematics, Vol 5) this publication consist a lot of the information on the condition of this world now. This specific book was represented just how can the world has grown up. The words styles that writer make usage of to explain it is easy to understand. Often the writer made some study when he makes this book. That's why this book suitable all of you.

Wayne Robinson:

Don't be worry in case you are afraid that this book will certainly filled the space in your house, you can have it in e-book approach, more simple and reachable. This particular Algebraic Curves and Riemann Surfaces (Graduate Studies in Mathematics, Vol 5) can give you a lot of buddies because by you taking a look at this one book you have factor that they don't and make you more like an interesting person. This book can be one of a step for you to get success. This book offer you information that maybe your friend doesn't know, by knowing more than different make you to be great individuals. So , why hesitate? We need

to have Algebraic Curves and Riemann Surfaces (Graduate Studies in Mathematics, Vol 5).
