Automatic Modulation Classification: Principles, Algorithms and Applications

Zhechen Zhu, Asoke K. Nandi

Automatic Modulation Classification: Principles, Algorithms and Applications Zhechen Zhu, Asoke K. Nandi

Automatic Modulation Classification (AMC) has been a key technology in many military, security, and civilian telecommunication applications for decades. In military and security applications, modulation often serves as another level of encryption; in modern civilian applications, multiple modulation types can be employed by a signal transmitter to control the data rate and link reliability.

This book offers comprehensive documentation of AMC models, algorithms and implementations for successful modulation recognition. It provides an invaluable theoretical and numerical comparison of AMC algorithms, as well as guidance on state-of-the-art classification designs with specific military and civilian applications in mind.

Key Features:

- Provides an important collection of AMC algorithms in five major categories, from likelihood-based classifiers and distribution-test-based classifiers to feature-based classifiers, machine learning assisted classifiers and blind modulation classifiers
- Lists detailed implementation for each algorithm based on a unified theoretical background and a comprehensive theoretical and numerical performance comparison
- Gives clear guidance for the design of specific automatic modulation classifiers for different practical applications in both civilian and military communication systems
- Includes a MATLAB toolbox on a companion website offering the implementation of a selection of methods discussed in the book

From reader reviews:

Ashley Paul:

In this 21st hundred years, people become competitive in most way. By being competitive right now, people have do something to make them survives, being in the middle of the crowded place and notice by means of surrounding. One thing that occasionally many people have underestimated it for a while is reading. That's why, by reading a e-book your ability to survive boost then having chance to endure than other is high. For you who want to start reading any book, we give you this Automatic Modulation Classification: Principles, Algorithms and Applications book as nice and daily reading e-book. Why, because this book is usually more than just a book.

Charles Barton:

A lot of people always spent their free time to vacation as well as go to the outside with them friends and family or their friend. Do you realize? Many a lot of people spent many people free time just watching TV, or perhaps playing video games all day long. If you would like try to find a new activity this is look different you can read a new book. It is really fun in your case. If you enjoy the book that you simply read you can spent all day long to reading a book. The book Automatic Modulation Classification: Principles, Algorithms and Applications it is rather good to read. There are a lot of folks that recommended this book. These folks were enjoying reading this book. In case you did not have enough space to bring this book you can buy the actual e-book. You can m0ore quickly to read this book from a smart phone. The price is not to cover but this book has high quality.

Joy Hutchinson:

Playing with family in a very park, coming to see the marine world or hanging out with pals is thing that usually you have done when you have spare time, in that case why you don't try point that really opposite from that. Just one activity that make you not experiencing tired but still relaxing, trilling like on roller coaster you already been ride on and with addition of knowledge. Even you love Automatic Modulation Classification: Principles, Algorithms and Applications, you can enjoy both. It is good combination right, you still need to miss it? What kind of hang-out type is it? Oh can happen its mind hangout men. What? Still don't understand it, oh come on its identified as reading friends.

James Harris:

Your reading sixth sense will not betray you actually, why because this Automatic Modulation Classification: Principles, Algorithms and Applications book written by well-known writer who really knows well how to make book which can be understand by anyone who read the book. Written with good manner for you, dripping every ideas and creating skill only for eliminate your own hunger then you still skepticism Automatic Modulation Classification: Principles, Algorithms and Applications as good book not simply by the cover but also through the content. This is one e-book that can break don't judge book by its cover, so do

you still needing an additional sixth sense to pick this specific!? Oh come on your reading sixth sense already told you so why you have to listening to yet another sixth sense.
