Making Embedded Systems: Design Patterns for Great Software Elecia White

Interested in developing embedded systems? Since they don't tolerate inefficiency, these systems require a disciplined approach to programming. This easy-to-read guide helps you cultivate a host of good development practices, based on classic software design patterns and new patterns unique to embedded programming. Learn how to build system architecture for processors, not operating systems, and discover specific techniques for dealing with hardware difficulties and manufacturing requirements.

Written by an expert who's created embedded systems ranging from urban surveillance and DNA scanners to children's toys, this book is ideal for intermediate and experienced programmers, no matter what platform you use.

- Optimize your system to reduce cost and increase performance
- Develop an architecture that makes your software robust in resource-constrained environments
- Explore sensors, motors, and other I/O devices
- Do more with less: reduce RAM consumption, code space, processor cycles, and power consumption
- Learn how to update embedded code directly in the processor
- Discover how to implement complex mathematics on small processors
- Understand what interviewers look for when you apply for an embedded systems job

"*Making Embedded Systems* is the book for a C programmer who wants to enter the fun (and lucrative) world of embedded systems. It's very well written—entertaining, even—and filled with clear illustrations."
—Jack Ganssle, author and embedded system expert.

From reader reviews:

Karen Imes:

As people who live in often the modest era should be upgrade about what going on or info even knowledge to make these individuals keep up with the era which can be always change and advance. Some of you maybe will certainly update themselves by examining books. It is a good choice for you personally but the problems coming to you is you don't know which you should start with. This Making Embedded Systems: Design Patterns for Great Software is our recommendation so you keep up with the world. Why, because book serves what you want and wish in this era.

Amber Orlowski:

Information is provisions for those to get better life, information presently can get by anyone at everywhere. The information can be a expertise or any news even a huge concern. What people must be consider any time those information which is inside the former life are challenging be find than now's taking seriously which one is appropriate to believe or which one often the resource are convinced. If you receive the unstable resource then you understand it as your main information you will see huge disadvantage for you. All those possibilities will not happen within you if you take Making Embedded Systems: Design Patterns for Great Software as the daily resource information.

Gerald Warfield:

The book Making Embedded Systems: Design Patterns for Great Software will bring someone to the new experience of reading a new book. The author style to explain the idea is very unique. In the event you try to find new book you just read, this book very suited to you. The book Making Embedded Systems: Design Patterns for Great Software is much recommended to you to study. You can also get the e-book in the official web site, so you can quicker to read the book.

Clifford Harvey:

What is your hobby? Have you heard that will question when you got college students? We believe that that question was given by teacher to the students. Many kinds of hobby, All people has different hobby. Therefore you know that little person just like reading or as studying become their hobby. You must know that reading is very important and book as to be the matter. Book is important thing to provide you knowledge, except your own teacher or lecturer. You get good news or update concerning something by book. Amount types of books that can you choose to use be your object. One of them is actually Making Embedded Systems: Design Patterns for Great Software.
