Geometric Topology in Dimensions 2 and 3 (Graduate Texts in Mathematics) E.E. Moise

Geometric topology may roughly be described as the branch of the topology of manifolds which deals with questions of the existence of homeomorphisms. Only in fairly recent years has this sort of topology achieved a sufficiently high development to be given a name, but its beginnings are easy to identify. The first classic result was the SchOnflies theorem (1910), which asserts that every 1-sphere in the plane is the boundary of a 2-cell. In the next few decades, the most notable affirmative results were the "Schonflies theorem" for polyhedral 2-spheres in space, proved by J. W. Alexander [Ad, and the triangulation theorem for 2-manifolds, proved by T. Rad6 [Rd. But the most striking results of the 1920s were negative. In 1921 Louis Antoine [A] published an extraordinary paper in which he 4 showed that a variety of plausible conjectures in the topology of 3-space were false. Thus, a (topological) Cantor set in 3-space need not have a simply connected complement; therefore a Cantor set can be imbedded in 3-space in at least two essentially different ways; a topological 2-sphere in 3-space need not be the boundary of a 3-cell; given two disjoint 2-spheres in 3-space, there is not necessarily any third 2-sphere which separates them from one another in 3-space; and so on and on. The well-known "horned sphere" of Alexander [A] appeared soon thereafter.

From reader reviews:

Eric Sanders:

Do you have favorite book? Should you have, what is your favorite's book? Publication is very important thing for us to learn everything in the world. Each book has different aim as well as goal; it means that reserve has different type. Some people sense enjoy to spend their a chance to read a book. They are reading whatever they have because their hobby is reading a book. Why not the person who don't like reading a book? Sometime, man or woman feel need book if they found difficult problem or perhaps exercise. Well, probably you will require this Geometric Topology in Dimensions 2 and 3 (Graduate Texts in Mathematics).

Guadalupe Leatherman:

Book is actually written, printed, or illustrated for everything. You can learn everything you want by a guide. Book has a different type. To be sure that book is important matter to bring us around the world. Next to that you can your reading expertise was fluently. A book Geometric Topology in Dimensions 2 and 3 (Graduate Texts in Mathematics) will make you to always be smarter. You can feel much more confidence if you can know about almost everything. But some of you think in which open or reading any book make you bored. It isn't make you fun. Why they might be thought like that? Have you looking for best book or acceptable book with you?

Ronald Karl:

The book untitled Geometric Topology in Dimensions 2 and 3 (Graduate Texts in Mathematics) contain a lot of information on the item. The writer explains the woman idea with easy means. The language is very simple to implement all the people, so do not really worry, you can easy to read the idea. The book was compiled by famous author. The author provides you in the new period of literary works. You can easily read this book because you can please read on your smart phone, or product, so you can read the book in anywhere and anytime. If you want to buy the e-book, you can start their official web-site along with order it. Have a nice examine.

Camille Wolfe:

A lot of book has printed but it takes a different approach. You can get it by online on social media. You can choose the most effective book for you, science, witty, novel, or whatever simply by searching from it. It is referred to as of book Geometric Topology in Dimensions 2 and 3 (Graduate Texts in Mathematics). You'll be able to your knowledge by it. Without leaving the printed book, it could add your knowledge and make a person happier to read. It is most crucial that, you must aware about book. It can bring you from one place to other place.
