## **Applied Correspondence Analysis: An Introduction (Quantitative Applications in the Social Sciences)**

Sten Erik Clausen

This volume provides readers with a simple, non-technical introduction to correspondence analysis (C.A.), a technique for summarizing the relationships among categorical variables in large tables. It begins with the history and logic of C.A. The author shows readers the steps to the analysis: category profiles and masses are computed, the distances between these points calculated and the best-fitting space of  $n$ -dimensions located. There are glossaries on appropriate programs from S.A.S. and S.P.S.S. for doing C.A. and the book concludes with a comparison of C.A. and log-linear models.
