Multiply! Just Follow The Patterns! Penelope Dyan

Here is a book by the award winning author, attorney and former teacher, Penelope Dyan, that will help you with your multiplication tables as you practice reading skills through word recognition word repetition and rhyme. And Dyan will be the first one to tell you that getting a mastery over math, is simply seeing the patterns! If you can see the patterns, then learning to multiply, not only becomes easy, it also it becomes interesting and fun! All you need to do is simply follow the patterns to the end result. You see, it's really all in the mathematical patterns; and if you can count to ten, then you can figure this out, and you will never have to worry knowing your multiplication tables again, because you will not only know all your multiplication tables, you will understand them inside out! "Let no man ignorant of geometry enter here," is inscribed above the door Plato's Academy in Athens. While we aren't exactly discussing geometry, we are not far away. After all, only a circle has no beginning and no end, and the simple square has four sides equal in length, with a perimeter that can be found by multiplying the length of one its equal sides by four, proving even a kid can get around a square! However, that is not the point of this book. Here we are only concerned with understanding how multiplication works; and as we explore the details of that, we can have some fun! And don't forget to look for the free music video that goes along with this book on the Bellissimavideo YouTube Channel for even MORE learning fun!
