Wave Propagation in Electromagnetic Media (Springer Series in Perception)

Julian L. Davis

Wave Propagation in Electromagnetic Media (Springer Series in Perception) Julian L. Davis

This is the second work of a set of two volumes on the phenomena of wave propagation in nonreacting and reacting media. The first, entitled *Wave Propagation in Solids and Fluids* (published by Springer-Verlag in 1988), deals with wave phenomena in nonreacting media (solids and fluids). This book is concerned with wave propagation in reacting media-specifically, in electromagnetic materials. Since these volumes were designed to be relatively self contained, we have taken the liberty of adapting some of the pertinent material, especially in the theory of hyperbolic partial differential equations (concerned with electromagnetic wave propagation), variational methods, and Hamilton-Jacobi theory, to the phenomena of electromagnetic waves. The purpose of this volume is similar to that of the first, except that here we are dealing with electromagnetic waves. We attempt to present a clear and systematic account of the mathematical methods of wave phenomena in electromagnetic materials that will be readily accessible to physicists and engineers. The emphasis is on developing the necessary mathematical techniques, and on showing how these methods of mathematical physics can be effective in unifying the physics of wave propagation in electromagnetic media. Chapter 1 presents the theory of time-varying electromagnetic fields, which involves a discussion of Faraday's laws, Maxwell's equations, and their applications to electromagnetic wave propagation under a variety of conditions.

From reader reviews:

Alvin Maltby:

What do you consider book? It is just for students since they are still students or the idea for all people in the world, what the best subject for that? Just you can be answered for that issue above. Every person has distinct personality and hobby for every single other. Don't to be compelled someone or something that they don't want do that. You must know how great as well as important the book Wave Propagation in Electromagnetic Media (Springer Series in Perception). All type of book could you see on many options. You can look for the internet solutions or other social media.

Samuel Lester:

In this 21st one hundred year, people become competitive in most way. By being competitive currently, people have do something to make all of them survives, being in the middle of the actual crowded place and notice simply by surrounding. One thing that occasionally many people have underestimated the item for a while is reading. Yes, by reading a e-book your ability to survive raise then having chance to stay than other is high. For you personally who want to start reading a book, we give you this particular Wave Propagation in Electromagnetic Media (Springer Series in Perception) book as starter and daily reading reserve. Why, because this book is greater than just a book.

Lawrence Caulfield:

Do you have something that you like such as book? The e-book lovers usually prefer to opt for book like comic, brief story and the biggest an example may be novel. Now, why not attempting Wave Propagation in Electromagnetic Media (Springer Series in Perception) that give your pleasure preference will be satisfied through reading this book. Reading practice all over the world can be said as the means for people to know world considerably better then how they react when it comes to the world. It can't be said constantly that reading habit only for the geeky individual but for all of you who wants to always be success person. So , for all of you who want to start reading as your good habit, you may pick Wave Propagation in Electromagnetic Media (Springer Series in Perception) become your own starter.

Melinda Brown:

Reading a guide make you to get more knowledge as a result. You can take knowledge and information originating from a book. Book is prepared or printed or created from each source that will filled update of news. In this modern era like now, many ways to get information are available for an individual. From media social including newspaper, magazines, science reserve, encyclopedia, reference book, novel and comic. You can add your knowledge by that book. Do you want to spend your spare time to spread out your book? Or just trying to find the Wave Propagation in Electromagnetic Media (Springer Series in Perception) when you needed it?
