The Changing Carbon Cycle: A Global Analysis

The Changing Carbon Cycle: A Global Analysis

The United States Government, cognizant of its responsibilities to future generations, has been sponsoring research for nine years into the causes, effects, and potential impacts of increased concentrations of carbon dioxide (CO₂) in the atmosphere. Agencies such as the National Science Foundation, National Oceanic and Atmospheric Administration, and the U.S. Department of Energy (DOE) cooperatively spent about \$100 million from FY 1978 through FY 1984 directly on the study of CO₂. The DOE, as the lead government agency for coordinating the government's research efforts, has been responsible for about 60% of these research efforts. William James succinctly defined our purpose when he stated science must be based upon "... irreducible and stubborn facts." Scientific knowledge can and will reduce the present significant uncertainty surrounding our understanding of the causes, effects, and potential impacts of increasing atmospheric CO₂. We have come far during the past seven years in resolving some underlying doubts and in narrowing the ranges of disagreement. Basic concepts have become less murky. Yet, much more must be accomplished; more irreducible and stubborn facts are needed to reduce the uncertainties so that we can improve our knowledge base. Uncertainty can never be reduced to zero. However, with a much improved knowledge base, we will be able to learn, understand, and be in a position to make decisions.
