Analysis of the Aerodynamic Orbital Transfer Capabilities of a Winged Re-Entry Vehicle

John P. Pienkowski

Analysis of the Aerodynamic Orbital Transfer Capabilities of a Winged Re-Entry Vehicle John P. Pienkowski

This is a NAVAL POSTGRADUATE SCHOOL MONTEREY CA report procured by the Pentagon and made available for public release. It has been reproduced in the best form available to the Pentagon. It is not spiral-bound, but rather assembled with Velobinding in a soft, white linen cover. The Storming Media report number is A161704. The abstract provided by the Pentagon follows: The ability to perform an inclination change maximizes the maneuverability of an orbiting space vehicle. Most maneuvers utilize a combined plane change and orbital transfer to the new orbit. This costs more in terms of energy and fuel than an in-plane change of orbits. The amount of DeltaV and fuel required for such an energy-intensive inclination change exceeds the benefit of performing the maneuver. However, this paper demonstrates that a winged re-entry vehicle, based on the currently proposed X-37, has the necessary thrust to change planes and then perform an in-plane transfer to achieve a new orbit. Using SIMULINK™ and LABVIEW simulation tools, this research found that the use of the aerodynamic lift of a winged re-entry vehicle produced more than 120° of inclination change with the minimal DeltaV achievable. Through small orbital maneuvers and atmospheric re-entry, the aerodynamics of the lift vector demonstrated that the spacecraft retained sufficient energy to prevent perigee collapse using an orbital regulation code to control throttle setting.

From reader reviews:

Marie Aultman:

The book Analysis of the Aerodynamic Orbital Transfer Capabilities of a Winged Re-Entry Vehicle has a lot details on it. So when you make sure to read this book you can get a lot of advantage. The book was compiled by the very famous author. The author makes some research ahead of write this book. This book very easy to read you may get the point easily after looking over this book.

Shawn Marsh:

This Analysis of the Aerodynamic Orbital Transfer Capabilities of a Winged Re-Entry Vehicle is great guide for you because the content which is full of information for you who have always deal with world and have to make decision every minute. This particular book reveal it info accurately using great arrange word or we can claim no rambling sentences inside. So if you are read the item hurriedly you can have whole info in it. Doesn't mean it only will give you straight forward sentences but tricky core information with wonderful delivering sentences. Having Analysis of the Aerodynamic Orbital Transfer Capabilities of a Winged Re-Entry Vehicle in your hand like finding the world in your arm, details in it is not ridiculous 1. We can say that no publication that offer you world throughout ten or fifteen second right but this e-book already do that. So , this can be good reading book. Hey Mr. and Mrs. busy do you still doubt this?

Patricia Gross:

Is it a person who having spare time and then spend it whole day by means of watching television programs or just lying down on the bed? Do you need something new? This Analysis of the Aerodynamic Orbital Transfer Capabilities of a Winged Re-Entry Vehicle can be the solution, oh how comes? A book you know. You are consequently out of date, spending your spare time by reading in this brand-new era is common not a geek activity. So what these guides have than the others?

Otis Thompson:

Don't be worry for anyone who is afraid that this book will certainly filled the space in your house, you can have it in e-book way, more simple and reachable. That Analysis of the Aerodynamic Orbital Transfer Capabilities of a Winged Re-Entry Vehicle can give you a lot of pals because by you taking a look at this one book you have point that they don't and make an individual more like an interesting person. This particular book can be one of a step for you to get success. This reserve offer you information that possibly your friend doesn't learn, by knowing more than various other make you to be great people. So , why hesitate? Let us have Analysis of the Aerodynamic Orbital Transfer Capabilities of a Winged Re-Entry Vehicle.
